AMENDMENT TO THE CLAIMS

[c01] (Currently Amended) A system for alerting a subscriber of an outgoing call ~~network-associated information upon receipt of a call~~, the system comprising:

a base station wirelessly transmitting to an accessory device;

the base station ~~receiving the call from a communications network, the base station~~ including a transmitter transmitting only called ealling line identification information to the accessory device, the called line identification information associated with the outgoing call to a called number network-associated information representing signaling within the communications network, the network-associated information outside a voice portion of the call; and

the accessory device including a wireless receiver and a display, the receiver wirelessly receiving ~~only the~~ called ealling line identification information and the display continuously presenting only the called ealling line identification information for a duration of the outgoing call,

wherein ~~when the call is received~~, the accessory device continuously presents the called ealling line identification information to the subscriber, thus informing the subscriber of a called party's ealler's identity associated with the outgoing call.

[c02] (Currently Amended) A system according to claim 1, the accessory device further comprising circuitry producing an alerting signal upon origination of the outgoing call activation.

[c03] (Original) A system according to claim 2, wherein the alerting signal is at least one of visual, audible, and tactile.

[c04] (Cancel)

U.S. Application No. 10/733,192 Art Unit 2681
Response to June 9, 2006 Office Action

- [c05] (Currently Amended) A system according to claim 1, wherein the accessory device continuously presents an originating time that the call was received for the duration of the outgoing call.
- [c06] (Currently Amended) A system according to claim 1, wherein the accessory device continuously presents the called calling line identification information until an on-hook condition is detected.
- [c07] (Currently Amended) A system according to claim 1, wherein when the called calling line identification information is received, a processor in the accessory device compares the called a calling telephone number to selected telephone numbers stored in memory, and
if a match is found, then the processor produces an alerting signal to alert of the outgoing incoming call;
~~if no match is found, then the processor does not produce the alerting signal to screen the incoming call, and~~
~~if the calling line identification information is not included with the call, the processor screens the incoming call.~~
- [c08] (Currently Amended) A method for alerting a subscriber of called calling line identification information associated with an outgoing call, the method comprising:

receiving the called line identification information ~~the call~~ at a base station, the called line identification information associated with the outgoing call to a called number call comprising the calling line identification information;
wirelessly transmitting only the called calling line identification information from a transmitter to an accessory device; and
continuously presenting the called calling line identification information to the subscriber for a duration of the outgoing call,

wherein the subscriber is alerted to the called ealling line identification information associated with the outgoing call.

- [c09] (Currently Amended) A method according to claim 8, further comprising producing an alerting signal upon origination of the outgoing call ~~receipt of the ealling line identification information~~.
- [c10] (Currently Amended) A method according to claim 8, further comprising producing a visual alerting signal upon receipt of the called ealling line identification information.
- [c11] (Currently Amended) A method according to claim 8, further comprising producing an audible alerting signal upon receipt of the called ealling line identification information.
- [c12] (Currently Amended) A method according to claim 8, further comprising producing a tactile alerting signal upon receipt of the called ealling line identification information.
- [c13] (Currently Amended) A device for alerting a subscriber of called ealling line identification information associated with an outgoing call, the device comprising:

a receiver wirelessly receiving only the called ealling line identification information from a base station; and

a display continuously presenting the called ealling line identification information for a duration of the outgoing call,

wherein when the called ealling line identification information is received, the device presents the called ealling line identification information to the subscriber, thus informing the subscriber of a called number ~~the ealling line identification information~~ associated with the outgoing call.
